Qwatro Corporation announces it now has EcoLogo™ certification

Toronto, ON - (February 4th, 2005) Qwatro Corporation, a leading manufacturer of environmentally friendly sanitation and industrial maintenance products announced the EcoLogo™ Certification of several of their environmentally friendly cleaning/maintenance products.

According to Bob Wagner, President and Chief Chemist of Qwatro Corporation, "It has been Qwatro's mandate since its inception to continually develop products that reduce environmental impact. This certification and partnership with the Environmental Choice™ Program (ECP) reflects Qwatro's commitment to manufacture products that promote a cleaner environment and a safer workplace. "

Qwatro products that meet the new EcoLogo™ Certification (CCD) requirements include: Bioshine - a heavy duty concentrated citrus cleaner/degreaser and deodorizer, the Bioterra family of products including - Bioterra, Bioterra XT and BioTerra CIP – Acid Replacement All Purpose Industrial Cleaners for removal of water scale, soap scum and rust stains, BioGize – an All Purpose Cleaner/Degreaser, Reflect – a Glass, Mirror and hard surface cleaner, O2Activ™ – a hydrogen peroxide based cleaner and degreaser as well as BioBac7, BioZyme and Qwest – biological drain and grease trap treatments.

"To receive EcoLogo™ Certification is a real achievement for our company. To date, there are just a handful of companies that are certified under the "new" tougher criteria set out by the Environmental Choice™ Program, and we are very proud that Qwatro is one of those companies. There are a few companies who had been certified under the old ECP requirements that will now have to upgrade and be re-certified" said Wagner.

The Environmental Choice™ Program is Canada's only national and comprehensive ecolabeling program. The Program's official symbol of certification - the EcoLogo™ - is a registered mark of Environment Canada. Environmental Choice™ accredited products are proven to have less of an impact on the environment because of how they are manufactured, consumed or disposed of. Certification of products and services is based on compliance with stringent environmental criteria that are established in consultation with industry, environmental groups, independent experts and research into the life-cycle impacts of a product or service.

Qwatro Corporation, manufactures and distributes over 200 environmentally friendly industrial maintenance and sanitation products to institutions including government departments, health care facilities, food and beverage processing companies and industrial corporations. Qwatro formulates and manufactures its products in Etobicoke, ON Canada.
